Summary

Computer Science graduate from King Saud University with hands-on experience in **Systems Administration** and **IT Support** at the Ministry of Commerce. Proven track record in managing **Active Directory**, **GPOs**, and **LAPS** in enterprise environments. Beyond infrastructure, I am a skilled **Full-Stack Developer** with expertise in **AI-driven applications** and real-time systems using **Python** and **Flutter**. Passionate about optimizing network security and building high-performance technical solutions.

Education

King Saud University Bachelor's Degree
Computer Science Riyadh, Saudi Arabia • 2020 - 2026

- **Relevant Coursework:** Computer Networks, Operating Systems, Database Management, and Artificial Intelligence.
- Developed a strong foundation in system architecture, network protocols, and software engineering principles.

Experience

Ministry of Commerce Riyadh, Saudi Arabia
IT Support & Systems Administration Intern Jun 2025 - Jan 2026

- Managed user accounts and organizational units (OUs) within **Active Directory** to ensure efficient access control.
- Administered user permissions and security protocols using **LAPS** to enhance endpoint security.
- Executed **Windows 11 enterprise migration**, assisting employees with system transitions and data integrity.
- Provided **comprehensive technical support** for employees, troubleshooting operating system, software, and hardware issues.
- Documented IT support tickets and resolved technical queries in a high-stakes government environment.

Projects

Nibras | Full-Stack Educational Platform

- Developed a real-time interactive platform using **Flutter** and **Supabase**.
- Engineered a "Tactical" game mode featuring a territory-claim system and real-time multiplayer scoring.
- Implemented secure backend logic using **SQL RPCs** for game state management and currency systems ("Sparks").
- Optimized the application for accessibility by strictly following **Reduced Motion** UI standards.

Arabic Sign Language (ArSL) Real-Time Translator

- Developed **ArSL Translator**, a real-time system that converts Arabic Sign Language gestures into text using Deep Learning.
- Trained a custom **CNN model (TFLite)** to recognize **31 Arabic letters** with a high confidence threshold (85%+).
- Implemented an efficient inference pipeline using **MediaPipe** and **OpenCV** with motion detection triggers to reduce false positives.
- Built a web-based version using **TensorFlow.js** for client-side browser inference, ensuring privacy and speed.
- Integrated Arabic NLP features for word autocorrection using **fuzzy string matching**.
- Deployed the system using **Docker** and **FastAPI**, and developed a **Flutter** snippet for cross-platform integration.

MyReservation | Web Reservation System

- Developed a web-based reservation management system focusing on backend efficiency and network reliability.
- Architected the system to handle concurrent booking requests with real-time availability updates.
- Managed the deployment environment, ensuring secure data flow between the web client and the database server.
- Implemented robust user authentication and role-based access control, mirroring professional **Active Directory** environments.

Skills

🔗 Networking & Infrastructure

Active Directory (AD), Group Policy Objects (GPO), LAPS, Network Troubleshooting, RAID Configuration

🔗 Software Development

Python, SQL, Dart, Flutter, FastAPI

🔗 AI & Computer Vision

TensorFlow Lite, OpenCV, Keras

🔗 Operating Systems & DevOps

Ubuntu Server, Docker, Git
